

IS THE WATER YOU'RE OFFERING YOUR EMPLOYEES SAFE?

Groundwater contamination is a bigger problem than you think and could risk the health of your workforce

Groundwater Contamination

FACT

A 3 year study of the nation's drinking water has found more than 200 unregulated chemicals in the tap water of 45 states.
- Scientific American December, 2009

And water concerns aren't just from waste disposal plants. They can also come from two other important sources:

Sanitary Sewer Overflow [SSO]

- ✓ Excess storm water
- ✓ Damaged sewer lines
- ✓ Blockages

Farming Groundwater Contamination

- ✓ Pesticides
- ✓ Fertilizers
- ✓ Animal waste
- ✓ Eroded sediment
- ✓ Antibiotics

THE CONSEQUENCES

Groundwater contamination carries serious consequences with it including these diseases:

- ❖ Naegleria Fowleri, a brain-eating amoeba that travel from the nasal passages into the brain
- ❖ Helicobacter Pylori which can cause stomach cancer – Typically found in those using non-disinfected well water [found in as much as 60% of groundwater wells]
- ❖ Stomach ulcers, painful sores found in the stomach lining or small intestine

PURE WATER TECHNOLOGY: A SOLUTION YOU CAN TRUST

The Pure Water Technology 3i system provides reliable point-of-use (POU) purification for fresh, healthy water you can count on, treating the water after it comes in contact with supply lines.

With the 3i system you get ...

- ❖ CleanContact™ -- Anti-microbial protection for touchpad and surrounding surfaces
- ❖ Pure Touch Dispensing System – Prevents germ cross-contamination near the dispensing nozzle
- ❖ Continuous oxygenated water – Reduces 96% of PCBs, chlorine and pharmaceuticals from your drinking water
- ❖ A safe and neat office – Ditch the 5 gallon jugs of water that strain your back and pile up in your storage area
